## 1. D.I.E.U. IS THE FRENCH ACRONYM OF DEFINITION D'UNE IMAGE EN TANT QU'ETAT UNIFIE

On the Royal coat of arms of the United Kingdom, we can see the inscription 'DIEU et • mon droit' of Norman origin. D.I.E.U. means « Définition d'une Image en tant qu'Etat Unifié » which translates to 'Definition of an image as a unified state'. It can also mean « je sais Définir l'Image de ce qui Est et possède un rapport d'Unité » which translates to 'I can define the image of what is and has got a relation of units'. « et » means 'with'. « et » also means 'the EL value' which is the structural signature of things : everything is perceived by the mind in its mass ratio, its structural value and its dimensional value, all of this by the mind. The dot « • » means 'reference point'. In this universe, each one of us is a represented reference point. This point is the very value of the law. Thus, you are your own representative. 'DIEU et • mon droit' translates into Latin as 'DEUS meumque jus'. DEUS means « Définition d'un Etat Unifié Stabilisé » which translates to 'Definition of a stabilized unified state'. D.I.E.U. makes one human being equal to another.

G.O.D. is the acronym of Global Organization by Definition. I can define a global organization. Indeed, I can define or say something about an image, a person for instance, and tell how tall this person is, tell his or her weight. I can identify something or someone in the dimensional relationship. As a consequence, we may say that G.O.D. is the uniqueness in the principle of verbalization of what is. This is the principle that makes us equal beings. It is the guarantee that makes us equal beings. Verbalization means speaking, writing, drawing or identifying.

Thus, G.O.D. is the protector of all things in the universe and is the original law. It is the only truth. G.O.D. is the measure of all things by regulation. Indeed, it is the knowing principle in the value of the mind. G.O.D. is also omnipresent, omnipotent, **omniscient**. Universal knowledge is called G.O.D. It is mind and matter. G.O.D. imposes dimensional legislation. Globalizing something means to define it by its image which is in the rights of the being and gives the unit relationship = UNICITY. Globality is defined by the circle. G.O.D. is the art of taking the measure of a whole.

Everything that is defined is dimensional and the dimensional value is the law of measurement, the first measurement of which is a whole. If the whole was all alone, it could not be measured. It is therefore necessary to be me and the object, me and the Creation and go around it. By looking at the object, I globalize it, I make it a whole in the sliced globality of the laws of measurement. Thus, I draw from it all the universal constants such as  $\pi$ . This makes it possible to define an image, i.e. a represented point. In geometry, a point is the most fundamental object and the most basic shape. It is represented by a dot. In our universe, we are ourselves points, reference points or images that can be defined. With G.O.D. I can Define a Global Organization. Hence, I know how to define the image of what is and that has a unit relationship which means that two things of the same nature have the same rights and the same properties and are alter egos. This allows us to define all things in the universe.

G.O.D. cannot be represented since it is in the mind and that it serves as legislation to govern all that is in materiality.

G.O.D. is the dimensional expression that can only be read with a dimensional language and whose reading key is the mind.

The common Semitic name for God is « EL ». It is the structural signature of things – everything is perceived by the mind in its structure, in its mass ratio and in its spatiality (x denotes width, y denotes height and z represents depth), all of it by the mind.

We live in a universe in three physical dimensions that only the mind can perceive and in which we are a represented reference point. Hence, it is a four-dimensional universe.

## 2. REPRESENTATIVENESS

Representation or representativeness is the legislation governing all things in the universe - it is the right to self-determination. Every human being is a represented being. The representativeness of a human being is his or her ability to act on himself or herself. Thus, you are alive and responsible for yourself. Your representativeness is therefore your most precious asset. We live in a common framework in which we are all represented beings. Dimensionality is defined by the image which is and has got a unit relationship for two things of the same nature which have the same properties in the principle of representativeness. We live in a universe in three physical dimensions (Top/Down ; Front/Back ; the notions of sides) that we perceive thanks to our mind. The fourth dimension is indeed our ability to analyze. Thus, we live in a four-dimensional universe in which we are a represented reference point. In mathematics, a reference point is an image. We are each one of us an image. All life forms in the universe have access to the coordinate system which is the universal language by spatialization. As a consequence, I exist as a represented reference point and I personally exercise my own representativeness. Men exercise their power through representativeness or cede it by voting for example. Indeed, when you vote for representatives such as Members of Parliament or a mayor for instance, you become represented by them and you lose your own representativeness. You lose your voice and give it to delegates who have a voice in legislation or government and who speak and act on behalf of you. The handbag of the Gods (cube or volume) is the principle of representativeness.

The laws of representativeness are as follows :

G.O.D. is the acronym of Global Organization Defined. I can define i.e. say something about a global organization such as an individual for instance or an object. Thus, I can tell the height of the object, its length, width and depth. Two things of the same nature have the same properties and the same rights. We are equal beings because we are represented. I am a living being, a represented human being.

Pi (3.14) is the ratio of the circumference of a circle to its diameter. It is a universal constant.

The pyramid is the edifice of population control based on the representativeness ceded by people who do not know about all the algebraic principles, the dimensional aspects and any regulations. Those in charge capture the energy of all the representativeness of individuals in order to establish a proprietary legal act on a global scale. If we cede our representativeness by voting for example, we become a slave, under guardianship. The law is always valid only for a whole. We are an individuality that is part of this globality. If I do not delegate my representativeness, no one can claim to be my representative. The system enclosing men is based on the notion of representativeness. Men are free and equal in rights by representation. We are beings defined by the laws of measure. We exist in the laws of Being and we have got unit relationships ((height, width, depth, mass ratio, density ratio, concordance ratio for example one liter equals one kilogram).

Humans are given some time in order to know if they want humanity as a model of society. By recovering their representativeness and accepting humanity and its values as a model of society in the law of representativeness, men will put an end to the system of society by pyramidal hierarchy. Having empathy for what the other is without judging him or her will make us add up and transcend each other. We will no longer leave humans behind to live without their basic rights such as the right to health, shelter and food. We must understand the fact that we exist, we are, and the others also exist as well as those who have been set aside by society and no longer have access to food or shelter. By renouncing the mercantile and iniquitous society, man will no longer be a slave. Man being indeed the first commodity, this society is a place of death for him. Representativeness therefore has a major impact in legislation and in the arbitration of all things. If we do not assert our representativeness, the system does.

There are three ways of granting representativeness :

- An individual lives and dies : he concedes it in space-time.
- An individual lives and dies in an accident.
- An individual concedes his representativeness to another.

### 3. REPRESENTATIVES

As it is written in article 1 of the Declaration of the Human and Civic Rights of August 26, 1789 : "Men are born and remain free and equal in rights". These men exist because they are represented. Human beings have universal natural rights. Those who have not granted their representativeness are free and equal in law and their only representative can only be themselves. It is also written in the Preamble: « The representatives of the French People, formed into a National Assembly, considering ignorance, forgetfulness or contempt of the rights of man to be the only causes of public misfortunes and the corruption of Governments, have resolved to set forth, in a solemn Declaration, the natural, unalienable and sacred rights of man, to the end that this Declaration, constantly present to all members of the body politic, may remind them unceasingly of their rights and their duties ». Men exercise this power of representation in assembly, that is to say in groups, in order to express their principle of sovereignty. Thus, the right to representation is signified in the constitutional model.

Human rights refer to the rights of the Whole. The voters give mandate (are represented) and hire a person called representative in order to lead them. The representatives who captured the representation of the people who voted for them legislate, discuss the labor code, the capacities of the people. G.O.D. is the representation that is worth law and those who have agreed to give it lose their right of self-determination. Indeed, we are in France in an institutional and constitutional society by principle of adherence. Representation is the principle of sovereignty. If you do not vote, you do not cede your representativeness. Thus, nothing unfair can be opposed or opposable to you. The constitution is the first contract binding men to each other in this society. We live in a contractual civil society. Those who did not subscribe to the contract, from the constitutional point of view, therefore did not cede their representativeness. The constitutional aspect makes men equal in law by right. There is a breach of conventional contract for those who no longer wish to join the system because, by voting, they expected something better. Thus, it is necessary to denounce the social contract because of the fact that its commitments are not kept, that it has always disadvantaged the interest of the greatest number for the benefit of a minority. This social contract is a clear deception. Indeed, the notion of reference point is not indicated in this contract. A reference point is governed by the laws of representation. Consequently, those in power are illegitimate by enforceable right for individuals who have not contracted. G.O.D. is the law which makes of any representation what one is to consent or not to the other. My freedom ends where another person's begins. Representativeness means that in the dimensional value, we are all equal. It is also written in the preamble : « In consequence whereof, the National Assembly recognises and declares, in the presence and under the auspices of the Supreme Being, the following Rights of Man and of the Citizen ». Men are equal in rights in their representativeness by definition in the unit relationship in the principle of « the Supreme Being », G.O.D.

G.O.D. is the principle of uniqueness, a natural right conferring on two things of the same nature the same rights and the same properties. Thus, if we refer to the French Constitution, men exercise their power by representativeness or cede it. The primary purpose of elections is the transfer of representativeness. The power over the representativeness of the signatory of the social contract also affects the descendants of the signatory.

#### 4. MEANING OF THE LETTERS OF THE ALPHABET

All the shapes of the letters of the alphabet are geometry. For example, if we divide the circle in half, we get the letter D. Each letter we use has a meaning in the dimensional value. The structural alphabet we use comes from the regulations of the very ancient Greek (See Plato: "No one enters here unless he is a geometer"). All the letters of the alphabet are drawn from the dimensional values. This is the law of Everything. It is necessary to realign the letters with the enciphering system which can have a double reading in the principles of materiality. Indeed A can have a value of 1 as well as a value of 0. It depends on the reading key you use. Each letter comes from the dimensional relationship in the sectional relationship. Words and writings have an energy of their own because they exist in the dimensional value.

**A** : We find the section at  $36^\circ$  as well as the section of the golden ratio found in the pentagram (the Universe which is visible from a material point-of-view). This is the nature and origin of things, the Alpha ( $\alpha$ ), the origin of 0.618. It is the principle of singularity. It is the Fibonacci sequence.

**B** : It is a circle above and below. It is the circle that is used as a measure with opposing circles. One finds there the principle of verticality in the value of the sections in order to find 3.14.

**C** : This is the universal constant in the increasing value. There are two sections of 3.14. It is the principles of the constant and increasing system of our Universe in the principle of dimensionality in the value of the sections. The section is not visible in the notion. It is the regulation of constancy of the Universe.

**D** : Refers to the art of measuring things. It is necessary to know how to slice. It is the measure of an arc. The letter D also refers to the Dimensional units, to Define, to Density because one deals with the laws of measurement. To measure things, it is necessary to react as the Universe and to put things in an opposite value, for example If you divide the circumference of the circle by the diameter, you will get approximately 3.14. With the letter D, we have the laws of physics, the regulation of the global system in the art of going around it. It is the definition of the invisible.

**E** : Means "what is" in the mass ratio, the structural value and the dimensional value.

**F** : Here we find the structural ratio and the mass value.

**G** : If you divide the circumference of the circle by the diameter, you will get approximately 3.14. The knowledge in the Global value, the visible and the invisible.

**H** : This is the value of the parallel systems of the mirror worlds. It is the H of the reverse side, i.e. the principle of elevation giving  $\pi$  on  $\pi$ . The  $\pi$  value determines the point, i.e. the image. The cross-section ratio is governed by the mirror worlds, where in the visible and invisible worlds the principle of regulation per cross-section value 3.14 is perceived.

**I** : Means Image. A reference point is an Image. It is the sliced value, the sectional value. It is the sliced knowledge of the dot in "i". It is the alignment. The measurement of things is done by the image.

**J** : This is the value of the golden ratio. It is the absolute before the material laws. It is what is before the notion of Being in the cup of unity. We are in the value of unity. It is the value of Being recognised in the principle of Being, that is, the principle of singularity, the system of unfolding, that is, the four branches, because from the point of origin to the state of Being one is left with a K. If we put things back together, we find the top of the pyramid. This is inscribed in the golden section. It is the Fibonacci sequence which is represented by the spiral and which represents the Creation which follows the golden ratio.  $J = 9$ .

**K** : It is the value of Being. It is the principle of Singularity. The value of K is dimensional in nature. It is the law of Being in the dimensional value called Being. This K in the laws of Being is practiced only in the dimensional value. The principle of Singularity generates the principle of dimensionality.

**L** : This is the dimensional value, verticality, horizontality ; abscissa and ordinate.

**M** : It is the 1 mirror, the notion of flow. It's the principle of the mirror world. You have to be able to see yourself in the Image.

**N** : It is the ascendancy and the descent for the resurgence that is to say the capacity to test one's rectitude passes by the bending in order to know how to rebound.

**O** : This is the circle, i.e. the overall value, the principle of the Whole, the notion of volume. The ratio of the circumference of a circle to its diameter gives the constant 3.14.

**Q** : It refers to the axe. It is sliced by the mind. It is the value of the mind in the value of evolution.

**R** : Taking the measure of things, the mirror world, Revolutionising i.e. going around the circle .

**S** : This is the opposite expression of system 8 which is the principle of eternity, infinity, the double snake. Laws of motion.

**T** : This is the T notion. The Throne bringing back the primary mind. It is the junction.

**U** : Indicates Union. Unity is the cutting of the whole of what is. U indicates the principle of Oneness, the principle of the Receptacle.

**V** : Refers to Value.

**X** : The X ratio indicates the notion of self in the spatialization. With X, one is flat, i.e. one does not have the top and the bottom. This is the essence of matter, the origin of X, i.e. the Universe.

**Y** : In the laws of measurement, it is the circle by 3, it is dimensional, it is the « ROY principle » or « Y principle » i.e. the  $\pi$  system. Indeed, **the ratio of the circumference of a circle to its diameter gives the constant 3.14** in the notion of the 3/3 principle.

**AEIOUY** : all this represents the value of the mind, the Unitary value. These are the mirror values, the secrets of language. The global value and the unitary value in the image of that which is of mind.

## 5. UNDERSTANDING PI

$\pi$  is the ratio of the circumference of any circle to the diameter of that circle. Circles are all similar, and "the circumference divided by the diameter" produces the same value regardless of their radius. This value is the ratio of the circumference of a circle to its diameter and is called  $\pi$  (Pi) : 3.14.

The first measure of a whole is to take its measure, so 3.14. This is the notion in the Mirror notion of measurement. Thus, the measurement by the value of the mind gives the golden section, the golden number,  $36^\circ$  in the measurement of the whole.

In 3.14 :

The number 3 represents the 1 in the bridge of truth.

The number 4 represents truth, the RE value (3 physical dimensions and one spiritual dimension). We are in four dimensions in the notion of Truth.

When a circle with a chord of radius  $r$  is unfolded, a line segment of length  $2\pi r$  is obtained. In the case of a circle of one unit diameter, the chord length is equal to  $\pi$ .

$\pi$  is the ratio of the perimeter  $P$  of a circle to its diameter  $D$  (twice the radius  $r$ ).

$\pi$  is present everywhere: from coins to the volume of the Earth and its surface, as well as in the length of a car's journey, in the laws of probability, in physics and in many other sciences.

## 6. THE CUBE

The cube serves as an interface in order to be able to read the dimensional aspects. It represents the structure of the Universe in the principle of singularity. This is the origin of mathematics. We find the notion of « 1 mirror » (the letter « M » represents two « 1 » in mirror), the principles of angularity (from 1 to 8). Materiality is a dimensionality relationship with a numerical value of 1 to 8 in the infinity ratio whose primary spirit (0) is not included in the materiality ratio. The time loop is from 1 to 8 because time is volume. Any volume in space moves in a spiral. The cube allows us to understand dimensional laws.

0 is the origin of everything and 9 is the structure of the golden number. The alignment is the 0 which begins again. There are 6 sides from top to bottom and 6 sides from side to side. The cube is included in the globality ratio. In our dimensional relationship, the reference point is the law. The 6-sided cube makes it possible to interpret the whole of the observed globality in its 3 dimensions. The geometry of Front/Back gives rise to dimensionality. It is about volumetric legislation, the volume within the volume, i.e. the hypercube. Numbers are the encoding system that allows us to visualise our dimensional Universe. Numbers and figures come from the dimensional relationship. Numbers are governed by the dimensional law. The notion of the cube is a guarantee of our fairness. A volume is governed by the laws of geometry. Mathematics is only the language of the volume that contains it : for example, the cube for the cube, the sphere for the sphere.

We are governed by volumes, e.g. a person measuring 1.75m is a volume of 1.75m; this person has a certain mass (kilograms), height, width, depth, circumference, sides. These are unit values. All these notions have points of correspondence. There are indeed correspondences and relations to other units of measurement. They are unit values, dimensional laws. There is a relationship between the unit of measurement (metre), the unit of mass (Kg), the units of surface (square metre), and the units of volume (cubic metre or litre). Everything is volume but dependent on a single volume, the legislation of the Whole.

Base 0 is the base on which the foundation must be placed. Base 0 is the property while base 1 is the structural aspect. The volume is the keystone, the handbag, the three-dimensional notion. The volume is therefore three-dimensional. The property of something is its constitution. We have to find the notion of the property of the volume. Its properties are its mathematics, both from a mathematical and structural point-of-view. For the cube it is a classical formulation :  $C^3$ . The volume is the notion of property. Mathematics is the language of volume, of a numerical value of a spatial reference. The

volume has a law in the whole of the Everything in the value outside the volume. The base 0 volume has a regulation. The base 1 (the structural aspect) is a base 3 because it is proper to everything, it is the part of the legislation of the capacity of the verbalisation. It is therefore the intrinsic capacity in verbalisation.

The system of figures with the cube is at the origin of figures and numbers. We start from the principle of reality, i.e. that something that is 1 is real, it has a base of 1. The universe is dimensional in nature. The dimensional legislation is represented by the cube, a partitioning system. The cube is visualised by the principle of angularity. The system of figures allows real values to be written, this is the notion of the RE value (RE = REal). The cube is an encoding system for writing numbers.

The cube is a dimensional creation, the original value from which everything sprang, the realm of nothingness, the value of 0. Now 0 is not nothing, it is what we lack in the unfolding and understanding of the reading of the relationship of dimensions.

The cube represents the universe in which we live from a dimensional point-of-view. The cube is the model for those dominating men in the art of establishing the pattern of civilisation and leading men to a path.

The number 666 represents the 6-sided cube as it can be observed in its 3 dimensions. To be anchored in materiality is to be anchored in 666.

The handbag of the Gods (= the cube or the volume or the representation of the Universe) is the principle of representativeness. There are statues or paintings of people carrying a handbag in one hand and a pine cone in the other to indicate that it is the essence of life that passes the test of fire. I exist by the simple notion that I am. We are represented reference points. This is called representativeness. I am not unaware of what this is worth in law. Humanity is law in the context in which I understand that « In the beginning was the Word, and the Word was with God, and the Word was God ». Indeed, the proper way to define something is to unify it.

I am governed by the laws of the circle and the laws of the cube. The law is the regulation of the volume. The cube is the transcription of the Universe. It corresponds to the volumetric legislation governing the whole Universe. We are volumes within volumes. The cube and the pyramid are volumetric in nature. Each side of the cube in vertical addition gives the sum 9. If you add each corner, you get 9 :  $7 + 2 = 9$  ;  $1 + 8 = 9$  ;  $4 + 5 = 9$  ;  $6 + 3 = 9$ . 0 and 9 are outside the system. This is a partitioning system with angularity principles.

777 represents omni-consciousness. The mind is materialized by the 0 contained in the Fibonacci sequence. It is the RA value, i.e. the rational (= RAational), metaphysical values.

## 7. THE UNIVERSE

The Universe is. It is a principle of singularity. It is the mind that creates it since all materiality is subject to the legislation of the mind that imposes it. The Universe has highly technical properties. This knowledge is called G.O.D.- two things of the same kind have the same properties and the same rights. Indeed, I am and I have got a unit relationship. A reference point in the Universe is defined in the x,y and z dimension. A reference point is defined as the image of that which is and has a unit relationship. This is the principle of representativeness. The unit relationship is what there is in the dimensional relationship (height, width, depth), these are the notions of Being. What exists in a unit relationship

allows me to know that two things of the same nature have the same property in the dimensional value. This allows us to know that the ratio of the circumference of a circle to its diameter is a constant called  $\pi$ , this also gives the principles of verbalisation and any principle of representation. We live in a four-dimensional Universe. In order to visualise something, we use representations. We have the principles of singularity when we go in another direction, we either go forward or backward. The Universe and its structure are dimensional in nature. The Universe is opposite ; the measurement of things in a physical and fundamental world is governed by the opposite system, e.g. the positive and negative polarity. It indicates something with two opposing but related qualities. The neutral value is loaded into either one or the other. This neutral value is almost invisible and comes from the 3/3 system. In order to visualise something, one uses dimensional regulations i.e. Top/Bottom, Front/Back and side notions. Every verbalisation system responds with the dimensionality relation ; the Universe is a singular principle with a dimensionality legislation. Thus, in this Universe, everything is defined by an image as a unified state.

In the laws of Being we have :

- the top with the Left and the Front
- The Bottom with the Right and the Back

They are principles in threes always by opposite system principle.

We find the structure of the golden ratio with the golden spiral in which we can take the ratio of sections, the Fibonacci sequence and finally 3.14. The expansion of the Universe can be seen in its structure and its system of deployment.

The continuum of an object in the Universe in its physical and material space corresponds to the laws governing space and time. Due to the fact that the Universe has a certain structure, matter only agglomerates in a certain way : Top/Bottom ; Front/Back and sides. The positive and the negative. Our Universe is dimensional in nature. Opposite systems by triangulation system will give the structure of matter in the Universe and pyramidal structures by principle of opposite systems. This is the structure of matter in the Universe and ultimately the laws of Being in the collapse of mass and that in the laws of the cube. This makes it possible to establish the laws of measurement, i.e. the fact of knowing how to calculate a sphere, a cube, an area, to differentiate between an area and a volume, to understand what a liquid or a solid is, how matter is agglomerated and how atoms are arranged and how they bond and react together. Thus everything is defined by the laws of measurement. A point is defined in the alignment of what is by the mind in the ratio of mass and the structural value and that in unity.

Understanding the laws of representation in which all things are defined by the laws of measurement, defining a point in alignment of that which is by the mind in the ratio of mass and the structural value and that in unity. This is therefore the only law governing the Universe - G.O.D, Global Organization by Definition. The Everything in the Sanskrit language (Sanskrit is a very ancient Indo-European language which is now one of the official languages of India) is called HOME.

In this Universe, a pencil can only be seen through the mind. Indeed, our mind analyses three things in one : in order to identify something, we must perceive it through the mind, in its mass ratio in its structural value and in its dimensional value through the laws of the mind. This is the principle of perception of our universe which is called the Trident principle. It is the Trinitarian principle of all things in legislation. A pencil is represented. These are regulations on objects, including humans.

EL =

- Structure = Top/Bottom, Front/Back and side concepts
- Mind = consciousness. Consciousness is made of quantum information
- Mass ratio = gravity
- In spatiality = x,y and z dimension.

All materiality is the result of the legislation of the mind that imposes it. Thus, the Universe is only the legislation imposed on the mind that attracts it. The creative mind is not the Universe.

## 8. STRUCTURE

There are three kingdoms :

- Mineral
- Vegetable
- Animal

A stone has a  $1/3$  value by the mind and a  $2/3$  value in its structure. The same goes for trees. So a stone is alive, a tree is alive ; the same thing for an animal which has  $1/3$  and  $2/3$  in what it is itself. I can dispose of a stone because of its own nature ; the same goes for trees. The same goes for animals, but we also belong to the animal class. We are civilisational individuals, i.e. we have the cognitive capacity to understand mathematics and legislation. We can therefore approach the knowledge of legislation with respect for all primary life forms of which man is a part. We have the measure of it because we live in a four-dimensional universe.

In binary language,  $0 = 0$  and  $1 = 1$ , but this is wrong because Nothing = 1 because 1 is the value of  $3/3$ , so  $0 = 2$  and  $1 = 3$  (1 is always worth 3).

1 at its original value is worth  $3/3$  (the origin of everything, the primary aspect).  $2/3$  corresponds to the body, to matter.  $1/3$  corresponds to the cognitive capacity, the cognitive mind.

This is the notion of mind in matter. A rock has the mind and has the total essence of life.

Power is the mental influence to capture the representativeness of an individual since the notion of representativeness is based on the mind i.e. the notion generating the Whole i.e. the notion of  $3/3 =$  the essence of the Whole. Indeed, to act on someone's mind is to take possession of their matter. The mind always acts on matter. When we act mentally on someone, we act on  $1/3$ , i.e. on the foundation of his universe to be reflected in his matter.

The most important thing to master in everything is its essence.

## 9. RE VALUE AND RA VALUE

These values represent duality.

1. RE/1 is a physical, material value. It is about the real, material world in 3 dimensions. The real principles are the dimensional legislation: Top, Bottom/Front, Back and the notions of side. The Real value is represented by the number 6.
2. RA/0 is the mental value, the rational value. The mind creates the singularity. It is about the world of the invisible. It is the access to one's psyche, the value of consciousness, of cogniscience represented by the number 7. Thus, the RA value makes it possible to understand that two things of the same nature have the same properties. Knowledge passes through the phase of RAtionality.

In the dimensional trinity, we see only 6 sides of the cube, i.e. 666 which represents the real ratio of the physical and material world in the three-dimensional value. 1 to 8 = RE value. If one sees only 6 sides, it means that one is not capable of a state of consciousness since 7 is the value of consciousness, the state of cogniscience. Therefore the two opposite sides of a dice will make 7 (6 + 1). This demonstrates that one is capable of cogniscience because of the fact that I have analysed well ; I do have a state of consciousness. Indeed it has more than 6 sides in appearance since it is in a dimensional relationship of which I know the rational ratio in the real value. 777 means consciousness; it is a matter of the mind. 0 and 9 have the same foundation = structure of the golden ratio in the deployment system.

Thus, all materiality is subject to the legislation of the spirit that imposes it. This Universe is created in the material world and is malleable because it is in motion. It is therefore malleable, therefore imperfect, and undergoes the legislation of the Rational mind that created it. This is the RA value which is that of the mind outside of creation.

## 10. THE ROI PRINCIPLE / THE ROY PRINCIPLE

The ROI/ROY principle is the governing principle : the right of an individual to self-determination = I am = representativeness = the most sacred right for an individual.

ROI = The Radius (R), the Circle (O) and the reference point (I, Image) in the x y z dimension.

The ROY principle can be represented by means of a circle in which we draw a "Y" and in which we find : "I am/he is/we are" facing an environment in the notion of Representation allowing each point of coordinates to exist in the law of Everything.

The governing principle (governed by G.O.D.) gives two things of the same nature the same properties and the rights. We are all alter egos. In a crown, we have in a very symbolic way the shape of the E. It represents the one who reigns. The crown makes the link between the spiritual and the material. The letter E in a recumbent position represents the trident of Poseidon, master of the flows. The flow is

everything in the Universe that is perceived. This is also the secret of the Round Table : one man, one people and the same law : one for all, all for one.

The ROI principle is the Pi system, i.e. 3.14 in the notion of the 3/3 principle.

The ROY principle is the principle of peace (see Equilibrium) = a reference point is represented, it is an image represented in the principle of globality.

## 11.PRINCIPLE OF SINGULARITY

The singularity principle of Being of the Universe generates the dimensional relationship in which we have the Top/Bottom ; the Front/Back and the notions of side. These are the laws of materiality governed by the laws of the cube. Indeed, everything in the Universe is governed by the laws of materiality. Materiality is readable by the dimensional mind. We are in a three- dimensional physical Universe that only the mind can perceive. The mind is a singularity that generates the Universe. The mind therefore creates the singularity. The principle of creation is the obelisk, the Universe by value of law. G.O.D is outside of creation, it is the principle of the origin of all things. We belong to creation and not the other way round.

"Life is" and this life generates the principle of singularity, i.e. the notion of Being and the value of dimensionality (See the letter K). This principle of singularity teaches us through the secret of the point to define things, i.e. the laws of measurement, 3,14. The universe contains a singularity encoding our universe.

We have the principle of singularity when we go in another direction, either we go forward or backward. The whole system of verbalisation responds through the dimensionality relationship. Only one law governs the Universe and this law determines all the laws. Thus the Universe is a singular principle which has a law of dimensionality. So in this Universe, everything is defined by an Image as a unified state.

Humans exist in the value of the cube. The dimensional value of the cube is Top/Bottom, Front/Back and the notions of side. This is the structure of our universe in the relationship of singularity. The pyramid is a dimension that we cannot go into because the relationship of dimensionality does not exist there. Singularity is imposed by the legislation of the mind. We live in a dimensional relationship. Every object for example has a certain density. Density is what defines things. To define is to densify. The notion of Being is the notion of a reference point, that is to say, the singularity of the universe that generates the K ratio. This ratio generates what we know of our universe, that is to say, the notions of dimensionality that are notions of Being, of what we are. We exist in a dimensional relationship defining the regulation of what is in the principle of singularity. Singularity is beyond what we perceive in the dimensional principle. The Universe is and possesses in its essence and arborescence all the structural and dimensional laws of what is called 3.14, i.e. the represented reference point.

## 12.PYRAMID

Our world is a volumetric pyramid hierarchy. The pyramid is based on the law of representation. Law is representation.

Representation in the notion of legislation means all that it imposes in variable geometry ; it is the fact that geometrically we are facing someone else and yet in this geometry we have a common legislation which is proper to each of us in the art of existing in the same element and that each of us is a Sacred Universe in the art of disposing of ourselves and in the art of not being judged to dispose of ourselves and not to represent a plague for the whole of other populations.

The pyramid of Cheops in mathematics identifies the foundation of the essence enclosing the formulation of universal mathematics from an algebraic point-of-view (universal calculation principle through the principle of algebra). This is the foundation of knowledge towards understanding : the basis of this structure to support and include itself in the great universal mechanism of managing all forms of life i.e. the three-dimensional relationship and the conceptual aspect to interpret them.

On the original pyramid of Giza, we have the mathematics of the universe and asymmetrical faces.

The pyramid is based on the law of representativeness. The law is representativeness. Men living in the pyramid are an integral part of its properties.

The pyramid is built with Pi (3.14), Phi (1.618), the cubit (52.36) and the metre. These are four universal constants linked together in the pyramid.

The pyramid has the value of the mind.

In the pyramid of Cheops, there is the code of G.O.D. The pyramids represent in a three-dimensional structural way all the keys to read our space-time and what we are.

The philosopher's stone is the technical and structural aspect of the pyramid system (hierarchisation; segmentation; sectorisation; behaviour) of the control and management of energy flows.

## 13.NUMBERS

0 : This is the entry point in matter by rationalising. It is the RA value, i.e. the value of the mind. 0 and 9 have the same foundation; ( J = 9; the letter J = the structure of the golden ratio in the deployment system). It is a 0 point that determines things.

1 : It is oneness, that is, the Universe which is one and in which we are all together. It is matter and mind generating all things. The whole Universe in the principle of singularity generating the relation of quadridimensionality.

2 : This is the positive/negative polarity. These are the opposite values.

3 : Dimensional trinity (x, y, z).

4 : Three physical dimensions and one spiritual dimension of the Universe and the individuals living in it. It is the number of Truth.

5 : This is the number of Man.

6 : This is the physical aspect that I perceive through the mind.

7 : This is the state of consciousness that brings us closer to the mind (number 6). It is the consciousness of things, i.e. the laws of measurement.

8 : This is the principle of infinity, the principle of eternity ; these are the laws of Being. It is the double snake. There are 8 angularities in the cube, that's why we say the Universe is infinite. This number represents having gone around the cube

9 : It is the value 9. It is flat, the Top and the Bottom ; it is the symbol of the golden spiral in which we find the structure of the Golden Number, the section ratio, the Fibonacci sequence, 3.14, the expansion of the Universe in its structure and its system of deployment.  $J = 9$ . With the number 9, we finish and start again.

The numbers are part of the organisation of the world as imagined by the Mesopotamians. The term Sar or Saros (3600) is represented in cuneiform writing by a circle. It also means: the All, the Totality, the Universe, the Cosmos. The perfect circle ( $360^\circ$ ) is divided into degrees, of which  $1/360$  is the unit ( $= 1$ ). The Sumerians (the non-Semitic people of Lower Mesopotamia who invented writing) invented and used a sexagesimal system, of which our culture has preserved traces, to express the measurement of time in hours, minutes and seconds or that of arcs and angles in degrees, minutes and seconds.

## 14. THE OBELISK

The obelisk is the structural code of the Universe. The Universe is analogical. The obelisk represents the Universe from a legislative point-of-view.

144 000 corresponds to the following code :

1= The universe is 1 = a principle of singularity. We live in one universe, the spirit of all things of a four-dimensional nature :

4 = a universe in 3 physical dimensions and a spiritual dimension of the Universe

4 = for individuals of the same nature that is : 3 physical dimensions and a spiritual dimension.

In the trinity of the 3 dimensional relationships :

000 = x,y,z . Everything is perceived by the mind in its mass ratio, its structural value and its dimensional value, the whole by the mind.

144,000 corresponds to the critical threshold of universal consciousness in the dimensional relationship.

144,000 is the structure of the Universe from a dimensional point-of-view. This 144,000 structure is a model of a single object: the obelisk. Truth is dimensional in nature, it is G.O.D by law. Everything in

the Universe exists only by dimensionality and nothing can exist except the imaged relationship of that which has a unit relationship.

The code 144,000 personas (masks, appearances) is the structure of the law for the creatures living in this Universe.

144,000 = code governing the Universe = the obelisk by law value = secret of the prism, the diamond = universal knowledge.

The principle of creation is the obelisk i.e. the Universe by law value. G.O.D. is outside creation. It is the principle of the origin of all things. Indeed, we belong to Creation and not the other way round.

At the top of the obelisk we find the value of the golden ratio, i.e. the 36 degree angle, which is also found in the pentagram (see the golden section of the golden ratio). This is the visible Universe from a mathematical point-of-view.

## 15. LAWS OF BEING = TRINITY PRINCIPLE

All things are perceived by the mind in the mass ratio, in the structural value and in the dimensional relationship (verticality/horizontality, what is called alignment) and this in the same value of the mind. The dimensional value of something corresponds to the unit of measurement (height, width, depth) in the measurement of things. The unit of measurement is the cup (weight/litre which have corresponding principles). The cup is the cup of Christ, the Holy Grail, the unitary value of all things. This is defined by the law value of all Existents in the dimensional value, value of unity. We are referring here to the notion of ELU or unity in the notion of Being in the dimensional value.

Being is the Trinitarian principle, that which defines what is.

« To be » is to be represented, to be present, to exist. (See "To be or not to be")

Being is the Trinitarian principle, that which defines what is. The property of a pen, for example, is to be straight, to have ink and a cap to protect it and its governing principle is to write. A simple object has within it all the laws of the Universe which determine the image of a unified state in the law of sets.

## 16. FROM THE INFINITELY SMALL TO THE INFINITELY LARGE :

The material world is a tangle of objects or groups of objects. On the one hand, there are the elementary particles, the atoms, and on the other hand the planets, the galaxies, the clusters of galaxies. Scale is what distinguishes different phenomena such as the rotation of the earth around the sun and the movement of an electron around a proton in a hydrogen atom. Indeed, there are 150,000,000 kilometres between the earth and the sun, while an electron and a proton are about half an angstrom apart. (An angstrom, whose symbol is Å, is a unit of measurement in atomic physics. Cryo-electron microscopy allows individual atoms to be observed in unprecedented detail, opening the door to a whole new universe.) Between these two extremes, there is a whole range of intermediate scales.

We are moving towards the University period, that is, the period of universality, the stated universe. We are going towards the Anubis system, i.e. the Universe in its dimensional value, in order to access a higher threshold of evolution. Access a universal model of civilisation. The observable universe. Understanding G.O.D. is accessing the universal knowledge i.e. the knowledge of the whole Universe

in which G.O.D. is the law, which will open us to another type of civilisation. University = unique. Knowledge is dimensional, it is the value of truth. The Universe is a unity.

## 17. RIDDLE OF THE SPHINX :

"Which creature has one voice and yet becomes four-footed and two-footed and three-footed ?"

The sphinx is the guardian of the mirror of truth.

Who is on all fours in the morning ?

From the beginning, it is the Universe : we live in a Universe with three physical dimensions and one spiritual dimension, which is our analytical capacity. This corresponds to the four relations of dimensionality.

Who is on two legs at noon ?

2 is the energy value, the positive or negative in the polaris system, the polarity, the even system.

Who is on 3 legs at night ?

The trident of the trinity, i.e. the trinitarian principle in the dimensional relationship : Everything is perceived by the mind in its mass relationship, its structural value and its dimensional value, the whole by the mind. This is the intrinsic and dimensional legislation for understanding the secrets of the trident and the reversibility of things. It is what is, it is the value of unity.

The answer is therefore HOME / Ohm i.e. the Whole, the Everything, the Universe in its dimensional structure : the Anubis system. It is the original form of knowledge that allows us to read all things in the Universe.

## 18. MATHEMATICS

Mathematics is the language of the volume that contains it : thus, the volume of a sphere cannot be calculated with the formula of a cube.

The formula for the volume of a cube is :  $C \times C \times C = C^3$

The formula for the volume of a pyramid is :  $\frac{\text{base area} \times \text{height}}{3}$

The formula for the area of a square is :  $C \times C = C^2$

The formula for the area of a triangle is :  $\frac{b \times h}{2}$

Mathematics is a unit of language (this is the definition of an Image as a unified state). Mathematics is therefore a universal language by spatialisation (i.e. me in relation to something, i.e. a coordinate in relation to another).

The notion of what languages manage is the notion of representation, i.e. the origin of all laws, the essence of the knowledge of the philosopher's stone, i.e. the original structure generating all dimensionalities

Mathematics is the ability to perceive the arithmetic of things.

In mathematics, a reference point in a volume is the law. Two reference points with the same characteristics and the same nature have the same rights.

For example, the mathematics of the cup is its property in its law in the structural aspect ; also, the mathematics of the computer mouse is its property in its structure, it is the language of the structure that composes it both in its structural and volumetric aspect. This is the foundation, the law is seen through all things. It is a mathematical relationship of a legislation of container/content in cognitive legislation. It is the universal language.

Mathematics is the expression of volume : the cube for the cube, the cup for the cup. In its volume, the mathematics of a cup is the volume of the cup, so it is the property of the cup. It is solid, it has structural properties in the fact that it is not liquid, not gaseous, but it is ceramic or porcelain.

Mathematics is a point of reference : it is the principle of representativeness, i.e. the means of representing the coordinate system in the environment, the global, the volumetric and the structural in the structure itself.

Mathematics is the expression of the volume that contains it in the spatial reference frame. There is no boundary in the universe, it is not palpable. We have a coordinate system, so it is a mathematical point. So there is a regulation of volume. It is an equation with one unknown but by transposition of the coordinate points. Indeed, language is verbalisation, not the universe conceptualised by humans. The world of the living is not perceived in the living of men ; it is another general concept, it is the fact of existing at another dimensional level of Man. Materially, we are there, but the ability to intervene here and now is only here and now.

Mathematics is a point of reference : it is the principle of representativeness, i.e. the means of representing the coordinate system in the environment, the global, the volumetric and the structural in the structure itself.

## 19. THE CULT OF BAAL :

A significant part of the population worships the cult of Baal. Baal represents the vicious circle. The populations always repeat the same operation, i.e. people give their representativeness by voting during elections. In this way, people give back their personal power. We may say they are Lotos eaters since they forget and stay in apathy.

## 20. THE LAWS OF MEASUREMENT

They are of a dimensional nature, in the Image. It is the principle of Representation. They are unit relationships. (Everything is perceived by the mind in its mass ratio, its structural value and its dimensional value in the same value of the mind).

Taking the measure, i.e. obtaining one of the first physical and material universal constants of our Universe (3.14) is done by the principle of section. It is necessary to split the object in two, to discern

it from what is visible and what is not visible. We are talking here about the laws of the visible and the invisible, i.e. the opposites. (In order to see the invisible of something, I have to know how to split it).

The opposite law causes the collapse of mass which generates a much larger Universe. We speak of the principle of singularity which is the principle of Oneness generating the principle of dimensionality. The visible in the invisible regulatory principle governing the whole framework. This makes it possible to define a point in the alignment, i.e. "i", the Image, i.e. a Whole (HOME, Globality). By principle of regulation in which two things of the same nature have the same properties.

**THE LAWS OF MEASUREMENT = LEX CALIBUR =** The sword of truth cutting through everything, i.e. that which allows us to take the measure. Indeed, in order to understand the truth of a whole, it is necessary to take the measure of it, i.e. to go around it (to go around the circle; the circle being the law of the Whole) and it is also necessary to cut in the axis:

Notions of the circle :

If I am looking for a ratio of constancy, no matter what the diameter of the circle is, I have to cut along the axis and so I will have a ratio of constancy equal to 3.14 or Pi. This is the notion of 3/3. This is the 3.14 ratio in the concept.  $\pi$  is the constant ratio of the circumference of a circle to its diameter in a Euclidean plane.

Properties of the circle : The charge is the deep energy of humans to be positive or negative in terms of polarity and interaction with others. This varies not the volume of the circle in the Whole but the charge. An energetic charge that will be positive or negative or have a certain mass.

Dimensional knowledge :

G.O.D. may be explained by depicting it as three circles in the x, y, z dimension :

The first circle corresponds to Global. It is the measure in the globality in the principle of horizontality. The ratio of the circumference of a circle to its diameter = 3.14. Globality is defined by the circle.

The second circle = in the laws of Everything, of the Whole

The third circle = in the measurement value.

→ Law of the invisible

The principle of the circle : the ratio of a circle's circumference to its diameter is the mathematical constant  $\pi$ . This is the realm of the mind in the real ratio (RE value = Reality) and the pentagonal value which is 0.618 but in the real and dimensional reading, we only have the possibility to use it under the value of the golden ratio which is 1.618 (The golden ratio is how the Universe exists in its dimensional relationship and its ratio of constancy). It is the RA (rational) value, i.e. that which is hidden beyond the perception of reality in which no matter what the diameter of the value 1 of the circle is, I will always have a rational value which will always have a ratio of constancy which will always be in the ratio of rationality 3, 14 in the psyche (universal constancy ratio) which will always be related to 3.14 and in the pentagonal value in which one finds, for a value 1, a value equivalent to 0.618 of the value 1 in the circle and 1.618 in the pentagonal value when one draws the pentagram (= all the equational markers of the Universe). The golden ratio is the key to the geometric construction of regular pentagons.

Notions of the triangle :

Area of an equilateral triangle formula =  $A = \frac{\sqrt{3}}{4} a^2$

Area of a right-angled triangle formula =  $\frac{\text{base} \times \text{height}}{2}$

### Notions of the cube :

The volume of a cube formula =  $s \times s \times s = s^3$

Every edge of the cube is the same length - Width = length = height

$$V = w \times l \times h$$

$$V = s^3$$

### The values of the sphere :

The formula for how to calculate the area of a sphere is:  $4 \times \pi \times R^2$

The formula for how to calculate the volume of a ball is :  $\frac{4}{3} \times \pi \times R^3$

In these notions we have the laws of representation.

We have a perception that we call the cube, it is the volumetric principle. There are principles of correspondence in the units of measurement. Everything around us is represented. The constants are included in the elementary regulations made for and by the laws of the circle.

### The pentagonal value of the circle :

A circle is a perfect geometrical figure - all polygons merge in a circle. If I draw a pentagon in a circle, I will have a section ratio of 0.618 in a circle of a value of 1. So, I have 5 times 0.618 for the value of the golden ratio. The value of a branch will be 0.618. With a pentagram, I have an opening angle of  $36^\circ$  (angularity value) in the "A". Hence the elements of concordance, for example if I have a circle, it is  $360^\circ$ . This is the gradation system of a circle, the principle of the laws of the circle by 10th (we have 10 times the angularity at  $36^\circ$ ).

Thus I can transfer 10 times the initial value of  $36^\circ$  in a circle of value 1 and whose section value has a value of 0,618 and by value of extension 1,618 then 2,618 etc. If you divide a line so that the ratio of the whole to the larger part is the same as the ratio of the larger part to the smaller, the ratio will be the golden ratio. It's an irrational number approximately equal to 1.618. This is the RA value, i.e. the value of the mind. Here we reach the Fibonacci sequence, i.e. the structure of the Universe in its

unfolding system. We find this in the evolution of our galaxy, the movement of stars, the growth of objects : it is the abstract, the rational value of things to unfold in this Universe. The five-pointed star shows us universal constants in the laws of the circle with a value of 1 in the ratio of constancy. These are the principles of representation. It is indeed the dimensional instruction of the laws of representation and arithmetic of things from a dimensional point-of-view and of the volumetric legislation. Thus, the pie chart by 10 gives  $360^\circ$  and the starting point of all things in the principle of regulation is the letter A, the Alpha.

The unit relationship is anchored to the relationship of dimensionality. Nothing can be defined unless we are able to make it a whole. The unit value is the value of measurement in the Top/Bottom ; Front/Back and side notions. This corresponds to the laws of measurement. I have a unit relationship (for example, I am 1.80 m tall and I weigh 100 kg) and I understand that two things of the same nature have the same properties and the same rights. We define the image which is the absolute unit relationship.

In the laws of measurement, we will ask the laws of Creation governing the principle of singularity to generate the laws of the cube, i.e. the dimensional relationships. These laws govern the Universe. This is what we call the laws of representation.

Thus, the laws of measurement (unit value) teach us that one individual is equal to another. The laws of Creation (the notion of Being = a point of reference) governing the principle of singularity (singularity of the Universe to generate the K relation) to generate the laws of the cube i.e. the dimensional relationships (Top/Bottom ; Front/Back and the notions of side) = THE LAWS OF REPRESENTATION i.e. the laws governing the Universe. This gives how we calculate areas and volumes. The application of the law of volume is space, time, relief, volume, mass, the whole.

As the universe is three-dimensional in nature (3 physical dimensions) matter can only be agglomerated in one way : the Star of David. This is one of the triangular principles where there are opposite, energetic values (+ -) ; we find all the scales of music This is repositioned in the principles of triangulation represented by the pyramidal principle and the inverted sections. In each angularity, I can put back all the musical notes with the scales.

The pentagram allows for all the calculations and equational relationships of the Universe. These are the principles of universal constancy and the legislation attached to them.

## 21. IN ORDER TO GET OUT OF THE PYRAMID

The human person must be at the centre of our concerns - the human person must be made the cornerstone of human issues, of human and social policy. The conventional and consensual agreement embedded in every individual must be - humans must no longer put up with inhumanity in this world. Therefore, one must fight for human values and a humane world in the art of collaboration. Thus, the notion of temporality in the notion of societal modelling will be realised.

You have to understand G.O.D.

One must keep one's representativeness and not give it to others by voting, for example, because this is harmful. A circular power with a circular economy must be implemented. We must return to the principles of administration by competence.

We must stop trading creation and demand laws for all humans on the planet.

We must assert the truth : what you want for yourself, you must also want for others.

We must abandon the pyramid model of society and unite in the principle of truth, i.e. understand that one individual is equal to another.

We must understand that we are linked as a human species.

We need to be 144,000 people on the Place de la Concorde in Paris and go in peace in order to put the value of the law back in its place, i.e. G.O.D. by law, One for all, all for one.
